Contributions should, preferably, be sent to a member of the Advisory Editorial Board who is familiar with the research reported or to one of the Editors:

A.D. BUCKINGHAM, F.R.S.
Editor of Chemical Physics Letters
University Chemical Laboratory, Lensfield Road
Cambridge CB2 1EW, UK

R.N. ZARE
Editor of Chemical Physics Letters
Department of Chemistry, Stanford University
Stanford, CA 94305, USA

in which case authors from the Western Hemisphere are requested to send their manuscripts to the USA Editor.
Important: please adhere to instructions to authors, to be found on the last page of each volume.

Chemical Physics Letters is published weekly. The subscription price per volume is Dfl. 325.00 (approx. \$ 130.00) excluding Dfl. 21.00 (approx. \$ 8.50) postage. Claims for issues not received should be made within three months of publication. If not they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 21 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller. For personal rates and conditions please contact the Publisher.

Elsevier Science Publishers B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AA Amsterdam, The Netherlands.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright to the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US \$2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

A NEW SERIES MODERN PROBLEMS IN CONDENSED MATTER SCIENCES

VOLUME 3 EXCITONS

edited by E. I. RASHBA, *Institute of Theoretical Physics, Moscow, U.S.S.R.* and M. D. STURGE, *Bell Laboratories, Murray Hill, N.J., U.S.A.*

1982 xii + 866 pages

Price: US \$180.75/Dfl. 425.00

ISBN 0-444-86202-1

Subscription price: US \$153.75/Dfl. 361.25

This publication presents a multi-authored survey of the current state of knowledge of excitons, with particular emphasis on recent advances in theory and experiment. Except for the relatively elementary tutorial introduction, the level is that of advanced graduate courses in solid state physics. Ten chapters deal with various aspects of Wannier excitons in semiconductors, two are primarily concerned with charge transfer excitons, and the remaining five with Frenkel excitons. These divisions are not rigid and the unity of the subject is emphasized. The work also features a comprehensive annotated bibliography of the field.

The book consists of separate, self-contained chapters covering modern achievements in the most active branches of exciton physics, where the most fundamental experimental and theoretical advances are being made. Because of this structure, the volume will be of use to experts wishing to familiarize themselves with progress in adjacent fields.

This international series aims at providing a suitable vehicle for the elucidation of those areas where workers in various laboratories and in different countries have taken different points of view. This volume gives an authoritative and thorough treatment by leading researchers in their fields and includes topics not usually covered by such a survey.

CONTENTS: Preface. *Chapters:* 1. Introduction (M. D. Sturge). 2. Electrodynamical and Non-local Optical Effects Mediated by Excitonic Polaritons (J. L. Birman). 3. Investigation of Exciton Polariton Dispersion by Laser Techniques (E. Koteles). 4. Spatial Dispersion Effects in the Exciton Resonance Region (E. L.

Ivchenko). 5. Optical Emission Due to Exciton Scattering by LO Phonons in Semiconductors (S. A. Permogorov). 6. Optical Orientation and Polarized Luminescence of Excitons in Semiconductors (G. E. Pikus and E. L. Ivchenko). 7. Exciton Electro-optics (A. G. Aronov and A. I. Ioselevich). 8. Excitons in Semiconductor Alloys (R. J. Nelson). 9. Free Many Particle Electron-hole Complexes in an Indirect Gap Semiconductor (V. B. Timofeev). 10. Bound Multi-exciton Complexes (M. L. W. Thewalt). 11. Biexcitons in CuCl and Related Systems (J. B. Grun, B. Honerlage and R. Levy). 12. Free and Self-trapped Excitons in Alkali Halides: Spectra and Dynamics (Ch. B. Lushchik). 13. Self-trapping of Excitons (E. I. Rashba). 14. Excitons in Magnetic Insulators (Y. Tabane and K. Aoyagi). 15. Dynamics of Molecular Excitons: Disorder, Coherence and Dephasing (A. H. Zewail, D. D. Smith and J. Lemaistre). 16. Excitons in Strained Molecular Crystals (V. I. Sugakov). 17. Excitons in Photosynthetic and Other Biological Systems (R. M. Pearlstein). 18. Vibrational Frenkel Excitons (M. V. Belousov). Bibliography. Index.

PHYSICS REPORTS

A REVIEW SECTION OF PHYSICS LETTERS

Over the years PHYSICS REPORTS has built up an international reputation as one of the leading review journals for diverse branches of physics, viz. The physics of elementary particles and fields; Nuclear physics; Atomic and molecular physics; Condensed matter, both structure, thermal and mechanical properties as well as electronic structure, electrical, magnetic and optical properties. To date some 400 review articles have been published.

PHYSICS REPORTS offers a substantial discount to INDIVIDUALS ONLY, so that research workers and/or graduate students will be in a position to afford their own copy of a particular Report.

A special brochure, containing all PHYSICS REPORTS (80 volumes) published to date, is available free of charge from the publisher.

In order to give you an impression of the nature of this review programme, the 1981 bestsellers are listed below.

PHYSICS REPORTS 1981 TOP 10

1. GAUGE THEORIES, by E. S. Abers and B. W. Lee. Volume 9, no. 1
2. QUANTUM CHROMODYNAMICS, by W. Marciana and H. Pagels. Volume 36, no. 3
3. NON-PERTURBATIVE ASPECTS IN QUANTUM FIELD THEORY, by E. Brézin and J. L. Gervais. Volume 49, no. 2
4. SUPERSYMMETRY, by P. Fayet and S. Ferrara. Volume 32, no. 5
5. THE RENORMALIZATION GROUP AND THE ϵ EXPANSION, by K. G. Wilson and I. Kogut. Volume 12, no. 2
6. LATTICE GAUGE FIELDS, by J. M. Drouffe and C. Itzykson. Volume 38, no. 3
7. PATH INTEGRALS IN QUANTUM THEORY: AN OUTLOOK OF BASIC CONCEPTS, by M. S. Marinov. Volume 60, no. 1
8. QUANTUM THEORY OF SOLITONS, by L. D. Faddeev and V. E. Korepin. Volume 42, no. 1
9. EXTENDED SYSTEMS IN FIELD THEORY (Proc. of the Meeting held at Ecole Normal Supérieure, Paris, June 16-21, 1975), edited by J. L. Gervais and A. Neveu. Volume 23, no. 3
10. GRAVITATION, GAUGE THEORIES AND DIFFERENTIAL GEOMETRY, by T. Eguchi, P. Gilkey and A. J. Hanson. Volume 66, no. 6

A NEW SERIES MODERN PROBLEMS IN CONDENSED MATTER SCIENCES

Volume 4 Spectroscopy and Excitation Dynamics of Condensed Molecular Systems

edited by V. M. AGRANOVICH, *Institute of Spectroscopy, USSR Academy of Sciences, Moscow, U.S.S.R.* and ROBIN M. HOCHSTRASSER, *University of Pennsylvania, Philadelphia, U.S.A.*

1983 xvi + 692 pages

Price: US \$166.00/Dfl. 390.00

ISBN 0-444-86313-3

Subscription price: US \$142.50/Dfl. 335.00

This volume is concerned with spectroscopy and energy transfer in organic crystals and glasses. New methods and their related theories are presented and in addition the most recent results on complex molecular systems are discussed by Eastern and Western authors. Recent important topics such as photon echoes, holeburning, line-narrowing, and non-linear spectroscopy are included, as are front line discussions on energy transport, percolation, the theories of energy redistribution in solids, and on the properties of charge transfer states.

CONTENTS: Preface. **Chapters** 1. Theories of Energy Transport (*R. Silbey*). 2. Excitons and Polarons in Organic Weak Charge Transfer Crystals (*D. Haarer and M. R. Philpott*). 3. Biphonons and Fermi-resonances in Vibrational Spectra of Solids (*V. M. Agranovich*). 4. Energy Transport in Mixed Molecular Crystals (*R. Kopelman*). 5. Exciton Coherence (*M. D. Fayer*). 6. Theory and Experimental Aspects of Photon Echoes in Molecular Solids (*W. H. Hesselink and D. A. Wiersma*). 7. Non-linear Laser Spectroscopy and Dephasing of Molecules: An Experimental and Theoretical Overview (*M. J. Burns, W. K. Liu and A. H. Zewail*). 8. Theory of Light Absorption and Emission by Organic Impurity Centers (*I. S. Osad'ko*). 9. Persistent Nonphotochemical Hole Burning and the Dephasing of Impurity

Electronic Transitions in Organic Glasses (*G. J. Small*). 10. Site Selection Spectroscopy of Complex Molecules in Solutions and Its Applications (*R. I. Personov*). 11. Effects of Electric Fields on the Spectroscopic Properties of Molecular Solids (*D. M. Hanson et al.*).

The Liquid State of Matter: Fluids, Simple and Complex

edited by E. W. MONTROLL, *University of Rochester, New York, U.S.A.* and
J. L. LEBOWITZ, *Rutgers University, New York, U.S.A.*

1982 viii + 440 pages

Price: US \$52.25/Dfl. 125.00

ISBN 0-444-86334-6

The objective of statistical mechanics is to explain and predict the properties of macroscopic matter from the properties of its microscopic constituents. The articles in this volume concern fluid matter.

The study of fluids has, in addition to its theoretical interest, many important practical applications. It would be very useful to be able to predict the properties of fluids, especially those composed of many different species of complex molecules. Chemical engineers designing large plants, mechanical engineers designing propulsion systems need to know equations of state, boiling points, heats of vaporization etc. On the other hand, the structure of real fluids, even the simplest ones, is too complex for a complete treatment from first principles. One of the main goals of fluid research has, therefore, been the development of simple, useful approximate descriptions of dense fluids. This research has been very successful for simple fluids - those composed of approximately spherical, neutral atoms or molecules with negligible dipole moments. The emphasis of research has therefore shifted in recent years to the study of more complex fluids - molecular, dipolar and ionic - as well as to nonuniform fluids. It is these subjects which are the

focus of the technical articles in this book.

CONTENTS: On the Equilibrium Theory of Fluids: An Introductory Overview (*J. L. Lebowitz and E. M. Waisman*). Non-Uniform Fluids (*J. K. Percus*). Dense Conducting Liquids (*N. W. Ashcroft*). The Equilibrium Statistical Mechanics of Simple Ionic Liquids (*B. Hafskjold and G. Stell*). Equilibrium Theory of Polyatomic Fluids (*D. Chandler*). Low Frequency Dielectric Properties of Liquid and Solid Water (*F. H. Stillinger*).
